

Free Webinar for Families of Children with Autism

Strategies to Navigate Challenging Behaviors During COVID-19

Thursday September 3
3:30-5:30pm (PT)

Now that families are spending more hours at home, parents may encounter new challenging behaviors from children. In this workshop, families will learn to identify the “why” of their child’s behavior. Parents will learn how to implement positive behavior support strategies including token economies and visuals to help make the best of the new “all in one” home. This webinar will also provide an overview of Applied Behavior Analysis and how to access behavior therapy during COVID-19.
