Data Limitations on Purchase of Services

- The following data are based on what the Regional Center paid for services to clients between July 1, 2018 and June 30, 2019.

- Disparities across ethnic and language groups do exist, but these differences do not mean that individual needs are not being met.

- Services purchased are based on the Individual Program Planning (IPP) process, so expenditures will be different from client to client. For example, choices clients and families make, such as out-of-home placement drive cost differences.

Access to Services Varies Substantially by Ethnicity

Access to services is lowest for Hispanic clients and highest for Black clients
